Insect temperature-body size trends common to laboratory, latitudinal and seasonal gradients are not found across altitudes
Publication: Research - peer-review › Journal article – Annual report year: 2018

Bridging food webs, ecosystem metabolism, and biogeochemistry using ecological stoichiometry theory
Publication: Research - peer-review › Journal article – Annual report year: 2017

Disentangling the counteracting effects of water content and carbon mass on zooplankton growth
Publication: Research - peer-review › Journal article – Annual report year: 2017

Ontogenetic body-mass scaling of nitrogen excretion relates to body surface area in diverse pelagic invertebrates
Publication: Research - peer-review › Journal article – Annual report year: 2016

Seasonal body size reductions with warming covary with major body size gradients in arthropod species
Publication: Research - peer-review › Journal article – Annual report year: 2017

A global synthesis of seasonal temperature-size responses in copepods: Seasonal temperature-size responses in copepods
Publication: Research - peer-review › Journal article – Annual report year: 2016

Role of zooplankton dynamics for Southern Ocean phytoplankton biomass and global biogeochemical cycles
Publication: Research - peer-review › Journal article – Annual report year: 2016

Shape shifting predicts ontogenetic changes in metabolic scaling in diverse aquatic invertebrates
Publication: Research - peer-review › Journal article – Annual report year: 2015

Equal temperature-size responses of the sexes are widespread within arthropod species
Publication: Research - peer-review › Journal article – Annual report year: 2015

How does Calanus helgolandicus maintain its population in a variable environment? Analysis of a 25-year time series from the English Channel
Publication: Research - peer-review › Journal article – Annual report year: 2015

Temperature-size responses match latitudinal-size clines in arthropods, revealing critical differences between aquatic and terrestrial species
Publication: Research - peer-review › Journal article – Annual report year: 2015

Body shape shifting during growth permits tests that distinguish between competing geometric theories of metabolic scaling
Publication: Research - peer-review › Journal article – Annual report year: 2014

Macroevolutionary patterns of sexual size dimorphism in copepods
Publication: Research - peer-review › Journal article – Annual report year: 2014

Re-assessing copepod growth using the Moultrate method
Publication: Research - peer-review › Journal article – Annual report year: 2014
Shifts in mass-scaling of respiration, feeding, and growth rates across life-form transitions in marine pelagic organisms
Publication: Research - peer-review › Journal article – Annual report year: 2014

Data compilation of respiration, feeding, and growth rates of marine pelagic organisms
Publication: Research › Dataset – Annual report year: 2013

Female-biased sex ratios in marine pelagic copepods: Comment on Gusmao et al. (2013)
Publication: Research - peer-review › Comment/debate – Annual report year: 2013
