Investigating coastal fish stocks and fishery opportunities at the west coast of Denmark -
DTU Orbit (30/01/2019)

**Investigating coastal fish stocks and fishery opportunities at the west coast of Denmark**

The project aims to increase our understanding of the ecosystem of the west coast of Denmark, focusing on important commercial species. In the beginning of the project all available information will be collected on fish species and environmental conditions of the area. More importantly, the project will collect new information from a scientific survey using DTU Aqua's Havfisken and fishing of participating commercial vessels. Combining historical and newly acquired information will help improve management of commercial species that utilise the coastal area. Finally, the project will investigate potential fishing opportunities in the area. The project is coordinated by DTU Aqua and is funded by the European Maritime and Fisheries Fund (EMFF) and the Danish Fisheries Agency.
