24-Dimensional Rate-Flexible Carrierless and Amplitude Phase Modulation for 100G IM-DD Transmission Using 850nm VCSEL

We demonstrate a 100 G 24-dimensional carrierless amplitude and phase modulation for the intra-datacenter interconnections. Its merits of the extended reach and the enhanced tolerance for the power loss and thermal are investigated.

General information
State: Published
Organisations: Department of Photonics Engineering, Metro-Access and Short Range Systems, Networks Technology and Service Platforms, High-Speed Optical Communication, Centre of Excellence for Silicon Photonics for Optical Communications, Eindhoven University of Technology
Number of pages: 3
Pages: 1-3
Publication date: 2018

Host publication information
Title of host publication: Proceedings of 2018 European Conference on Optical Communication
Publisher: IEEE
ISBN (Print): 9781538648612
Keywords: Quadrature amplitude modulation, Vertical cavity surface emitting lasers, Lattices, Phase modulation, Two dimensional displays, Optical transmitters
DOIs: 10.1109/ECOC.2018.8535573
