A new k-epsilon model consistent with Monin-Obukhov similarity theory

A new k-epsilon model is introduced that is consistent with Monin–Obukhov similarity theory (MOST). The proposed k-epsilon model is compared with another k-epsilon model that was developed in an attempt to maintain inlet profiles compatible with MOST. It is shown that the previous k-epsilon model is not consistent with MOST for unstable conditions, while the proposed k-epsilon model can maintain MOST inlet profiles over distances of 50 km.

General information
State: Published
Organisations: Department of Wind Energy, Aerodynamic design, Resource Assessment Modelling
Contributors: van der Laan, P., Kelly, M. C., Sørensen, N. N.
Number of pages: 11
Pages: 479–489
Publication date: 2017
Peer-reviewed: Yes

Publication information
Journal: Wind Energy
