A Reaction Database for Small Molecule Pharmaceutical Processes Integrated with Process Information

This article describes the development of a reaction database with the objective to collect data for multiphase reactions involved in small molecule pharmaceutical processes with a search engine to retrieve necessary data in investigations of reaction-separation schemes, such as the role of organic solvents in reaction performance improvement. The focus of this reaction database is to provide a data rich environment with process information available to assist during the early stage synthesis of pharmaceutical products. The database is structured in terms of reaction classification of reaction types; compounds participating in the reaction; use of organic solvents and their function; information for single step and multistep reactions; target products; reaction conditions and reaction data. Information for reactor scale-up together with information for the separation and other relevant information for each reaction and reference are also available in the database. Additionally, the retrieved information obtained from the database can be evaluated in terms of sustainability using well-known “green” metrics published in the scientific literature. The application of the database is illustrated through the synthesis of ibuprofen, for which data on different reaction pathways have been retrieved from the database and compared using “green” chemistry metrics.

General information
State: Published
Organisations: Department of Chemical and Biochemical Engineering, PROSYS - Process and Systems Engineering Centre, KT Consortium, King Mongkut's Institute of Technology Ladkrabang
Contributors: Papadakis, E., Anantpinijwatna, A., Woodley, J., Gani, R.
Number of pages: 25
Publication date: 2017
Peer-reviewed: Yes

Publication information
Journal: Processes
Volume: 5
Issue number: 5
Article number: 58
ISSN (Print): 2227-9717
Ratings:
Web of Science (2018): Indexed yes
Web of Science (2017): Impact factor 2.973
Web of Science (2017): Indexed yes
ISI indexed (2013): ISI indexed no
Original language: English
Keywords: Reaction database, Pharmaceutical process engineering, Organic solvents, “Green” metrics analysis
Electronic versions:
processes_05_00058_1_1.pdf
DOIs:
10.3390/pr5040058
