A Survey on the Ship Loading Problem - DTU Orbit (08/08/2018)

A Survey on the Ship Loading Problem
Recent statistics show that large container terminals can process more than 30 million containers a year, and are constantly in search for the better ways to optimize processing time, deliver high quality and profitable services. Some of the terminal decisions are, however, dependent on externalities. One of those is the ship loading process. Based on the stowage plan received by liner shippers, terminal operators plan the execution of load and discharge operations. In this paper we present a literature review for the Ship Loading Problem, where stowage and loading sequencing and scheduling are integrated to improve the efficiency of the ship handling operations. We present a survey of the state-of-the-art methods and of the available benchmarking data.

General information
State: Published
Organisations: Department of Transport, Transport optimisation and technique
Authors: Iris, C. (Intern), Pacino, D. (Intern)
Pages: 238-251
Publication date: 2015

Host publication information
Title of host publication: Computational Logistics. Proceedings of 6th International Conference, ICCL 2015
Publisher: Springer
ISBN (Print): 978-3-319-24263-7

Series: Lecture Notes in Computer Science
Volume: 9335
ISSN: 0302-9743
BFI conference series: International Conference on Computational Logistics (5010136)
Main Research Area: Technical/natural sciences
DOIs: 10.1007/978-3-319-24264-4_17
