Basics of antibody phage display technology - DTU Orbit (03/11/2018)

**Basics of antibody phage display technology**

Antibody discovery has become increasingly important in almost all areas of modern medicine. Different antibody discovery approaches exist, but one that has gained increasing interest in the field of toxinology and antivenom research is phage display technology. In this review, the lifecycle of the M13 phage and the basics of phage display technology are presented together with important factors influencing the success rates of phage display experiments. Moreover, the pros and cons of different antigen display methods and the use of naive versus immunized phage display antibody libraries is discussed, and selected examples from the field of antivenom research are highlighted. This review thus provides in-depth knowledge on the principles and use of phage display technology with a special focus on discovery of antibodies that target animal toxins.

**General information**

State: Published
Organisations: Department of Biotechnology and Biomedicine, Section for Microbial and Chemical Ecology, Metabolic Signaling and Regulation, Tropical Pharmacology and Biotherapeutics, Network Engineering of Eukaryotic Cell factories, IONTAS Ltd, Technical University of Denmark
Contributors: Ledsgaard, L., Kilstrup, M., Karatt-Vellatt, A., McCafferty, J., Laustsen, A. H.
Number of pages: 15
Publication date: 2018
Peer-reviewed: Yes

**Publication information**

Journal: Toxins
Volume: 10
Issue number: 6
Article number: 236
ISSN (Print): 2072-6651
