BepiPred-2.0: improving sequence-based B-cell epitope prediction using conformational epitopes - DTU Orbit (19/05/2017)

**BepiPred-2.0: improving sequence-based B-cell epitope prediction using conformational epitopes**

Antibodies have become an indispensable tool for many biotechnological and clinical applications. They bind their molecular target (antigen) by recognizing a portion of its structure (epitope) in a highly specific manner. The ability to predict epitopes from antigen sequences alone is a complex task. Despite substantial effort, limited advancement has been achieved over the last decade in the accuracy of epitope prediction methods, especially for those that rely on the sequence of the antigen only. Here, we present BepiPred-2.0 (http://www.cbs.dtu.dk/services/BepiPred/), a web server for predicting B-cell epitopes from antigen sequences. BepiPred-2.0 is based on a random forest algorithm trained on epitopes annotated from antibody-antigen protein structures. This new method was found to outperform other available tools for sequence-based epitope prediction both on epitope data derived from solved 3D structures, and on a large collection of linear epitopes downloaded from the IEDB database. The method displays results in a user-friendly and informative way, both for computer-savvy and non-expert users. We believe that BepiPred-2.0 will be a valuable tool for the bioinformatics and immunology community.

**General information**

State: E-pub ahead of print
Organisations: Department of Bio and Health Informatics, Immunoinformatics and Machine Learning, La Jolla Institute for Allergy & Immunology
Authors: Jespersen, M. C. (Intern), Peters, B. (Ekstern), Nielsen, M. (Intern), Marcatili, P. (Intern)
Number of pages: 6
Publication date: 2017
Main Research Area: Technical/natural sciences
