Change detection in multi-temporal dual polarization Sentinel-1 data - DTU Orbit
(26/11/2018)

Change detection in multi-temporal dual polarization Sentinel-1 data
Based on an omnibus likelihood ratio test statistic for the equality of several variance-covariance matrices following the complex Wishart distribution with an associated p-value and a factorization of this test statistic, change analysis in a time series of 19 multilook, dual polarization Sentinel-1 SAR data in the covariance matrix representation (with diagonal elements only) is carried out. The omnibus test statistic and its factorization detect if and when change occurs.

General information
State: Published
Organisations: Department of Applied Mathematics and Computer Science, Image Analysis & Computer Graphics, National Space Institute, Microwaves and Remote Sensing, Research Center Jülich GmbH
Contributors: Nielsen, A. A., Canty, M. J., Skriver, H., Conradsen, K.
Number of pages: 8
Pages: 3901-3908
Publication date: 2017

Host publication information
Title of host publication: Proceedings of Geoscience and Remote Sensing Symposium
Publisher: IEEE
ISBN (Print): 9781509049516
Keywords: Synthetic aperture radar, Aircraft, Covariance matrices, Airports, Earth, Google, Histograms
DOIs:
