CodeTrust: Trusting Software Systems

The information society is building on data and the software required to collect and analyse these data, which means that the trustworthiness of these data and software systems is crucially important for the development of society as a whole. Efforts to establish the trustworthiness of software typically include parameters, such as security, reliability, maintainability, correctness and robustness.

General information
State: Published
Organisations: Department of Applied Mathematics and Computer Science, Cyber Security, Technical University of Denmark
Contributors: Jensen, C., Nielsen, M. B.
Pages: 58-74
Publication date: 2018

Host publication information
Title of host publication: Trust Management XII
Volume: 528
Publisher: Springer
ISBN (Print): 9783319952765
(IFIP Advances in Information and Communication Technology, Vol. 528).
DOIs: 10.1007/978-3-319-95276-5_5
