Cutavirus in Cutaneous Malignant Melanoma - DTU Orbit (28/12/2018)

Cutavirus in Cutaneous Malignant Melanoma

A novel human protoparvovirus related to human bufavirus and preliminarily named cutavirus has been discovered. We detected cutavirus in a sample of cutaneous malignant melanoma by using viral enrichment and high-throughput sequencing. The role of cutaviruses in cutaneous cancers remains to be investigated.
