Effective carrier sweepout in a silicon waveguide by a metal-semiconductor-metal structure

We demonstrate effective carrier depletion by metal-semiconductor-metal junctions for a silicon waveguide. Photogenerated carriers are efficiently swept out by applying bias voltages, and a shortest carrier lifetime of only 55 ps is demonstrated.

General information
Publication status: Published
Organisations: Department of Photonics Engineering, Nanophotonic Devices, High-Speed Optical Communication, Diode Lasers and LED Systems
Contributors: Ding, Y., Hu, H., Ou, H., Oxenløwe, L. K., Yvind, K.
Number of pages: 2
Publication date: 2015

Host publication information
Title of host publication: Proceedings of 2015 Conference on Lasers and Electro-Optics (CLEO)
Publisher: IEEE
ISBN (Print): 978-1-55752-968-8
DOI: 10.1364/CLEO_SI.2015.SM1I.5

Bibliographical note
From the session: Silicon Photonics (SM1I)
Source: PublicationPreSubmission
Source-ID: 110725924
Research output: Chapter in Book/Report/Conference proceeding › Article in proceedings – Annual report year: 2015 › Research › peer-review
