First demonstration of single-mode MCF transport network with crosstalk-aware in-service optical channel control - DTU Orbit (24/12/2018)

First demonstration of single-mode MCF transport network with crosstalk-aware in-service optical channel control

We demonstrate the first crosstalk-aware traffic engineering as a use case in a multicore fibre transport network. With the help of a software-defined network controller, modulation format and channel route are adaptively changed using programmable devices with XT monitors.

General information
State: Published
Organisations: Department of Photonics Engineering, High-Speed Optical Communication, Centre of Excellence for Silicon Photonics for Optical Communications, NTT Corporation, Coriant R&D GmbH, University of Southampton, Fujikura Ltd.
Number of pages: 3
Publication date: 2017

Host publication information
Title of host publication: 2017 European Conference on Optical Communication (ECOC)
Place of publication: Sweden
Publisher: IEEE
DOIs: 10.1109/ECOC.2017.8346092
