In vitro production of bovine embryos: cumulus/granulosa cell gene expression patterns point to early atresia as beneficial for oocyte competence

In vitro production of bovine embryos has become widespread technology implemented in cattle breeding and production. Here, we review novel data on cumulus/granulosa cell gene expression, as determined by RNAseq on cellular material from pooled follicular fluids at the single animal level, and relate these findings to previous data on oocyte developmental competence and ultrastructure. The cumulus/granulosa cell gene expression patterns indicate that early follicular atresia is associated with increased blastocyst yield and this hypothesis is supported by previous data on oocyte competence and ultrastructure.

General information
Publication status: Published
Organisations: Department of Bio and Health Informatics, Administration, University of Copenhagen, University of São Paulo, Aarhus University
Number of pages: 8
Pages: 482-489
Publication date: 2017

Host publication information
Title of host publication: Proceedings of the 31th Annual Meeting of the Brazilian Embryo Technology Society (SBTE)
Volume: 14
(Animal Reproduction Science).
Keywords: IVP, Biomarkers, Transcriptomics, Granulosa cells, Atresia, Cattle, Oocyte competence
DOIs: 10.21451/1984-3143-AR990
Source: FindIt
Source-ID: 2373045496
Research output: Chapter in Book/Report/Conference proceeding › Article in proceedings – Annual report year: 2017 › Research › peer-review
