Laser Rate Equation Based Filtering for Carrier Recovery in Characterization and Communication - DTU Orbit (01/01/2019)

Laser Rate Equation Based Filtering for Carrier Recovery in Characterization and Communication

We formulate a semiconductor laser rate equation based approach to carrier recovery in a Bayesian filtering framework. Filter stability and the effect of model inaccuracies (unknown or un-useable rate equation coefficients) are discussed. Two potential application areas are explored: laser characterization and carrier recovery in coherent communication. Two rate equation based Bayesian filters, the particle filter and extended Kalman filter, are used in conjunction with a coherent receiver to measure frequency noise spectrum of a photonic crystal cavity laser with less than 20 nW of fiber-coupled output power. The extended Kalman filter is also used to recover a 28 Gbd DP-16 QAM signal where a decision-directed phase-locked loop fails.

General information
State: Published
Organisations: Department of Photonics Engineering, High-Speed Optical Communication, Nanophotonics Theory and Signal Processing, Metro-Access and Short Range Systems, Helmut Schmidt Universität, KTH - Royal Institute of Technology, RISE ICT
Pages: 3271-3279
Publication date: 2015
Peer-reviewed: Yes
