NT5C2 germline variants alter thiopurine metabolism and are associated with acquired NT5C2 relapse mutations in childhood acute lymphoblastic leukaemia - DTU Orbit (08/10/2018)

NT5C2 germline variants alter thiopurine metabolism and are associated with acquired NT5C2 relapse mutations in childhood acute lymphoblastic leukaemia

The antileukaemic drug 6-mercaptopurine is converted into thioguanine nucleotides (TGN) and incorporated into DNA (DNA-TG), the active end metabolite. In a series of genome-wide association studies, we analysed time-weighted means (wm) of erythrocyte concentrations of TGN (Ery-TGN) and DNA-TG in 1009 patients undergoing maintenance therapy for acute lymphoblastic leukaemia (ALL). In discovery analyses (454 patients), the propensity for DNA-TG incorporation (wm DNA-TG/ wm Ery-TGN ratio) was significantly associated with three intronic SNPs in NT5C2 (top hit: rs72846714; P = 2.09 × 10^{-10}, minor allele frequency 15%). In validation analyses (555 patients), this association remained significant during both early and late maintenance therapy (P = 8.4 × 10^{-6} and 1.3 × 10^{-3}, respectively). The association was mostly driven by differences in wm Ery-TGN, but in regression analyses adjusted for wm DNA-TG (P = 0.029). Targeted sequencing of NT5C2 did not identify any missense variants associated with rs72846714-A genotype. rs72846714 was not associated with relapse risk, but in a separate cohort of 180 children with relapsed ALL rs72846714-A genotype was associated with increased occurrence of relapse-specific NT5C2 gain-of-function mutations that reduce cytosol TGN levels (P = 0.03). These observations highlight the impact of both germline and acquired mutations in drug metabolism and disease trajectory.

General information
State: Accepted/In press
Organisations: Department of Bio and Health Informatics, Disease Intelligence and Molecular Evolution, University of Southern Denmark, Landskøt University Hospital, Norwegian University of Science and Technology, Uppsala University, University of Gothenburg, Vilnius University, Talin Children's Hospital, Aarhus University, University of Oslo, University of Tartu, University of Minnesota, New York University, Copenhagen University Hospital, University of Copenhagen, Technical University of Denmark
Publication date: 2018
Main Research Area: Technical/natural sciences
