Optimization of photonic crystal cavities

We present optimization of photonic crystal cavities. The optimization problem is formulated to maximize the Purcell factor of a photonic crystal cavity. Both topology optimization and air-hole-based shape optimization are utilized for the design process. Numerical results demonstrate that the Purcell factor of the photonic crystal cavity can be significantly improved through optimization.

General information
State: Published
Organisations: Department of Mechanical Engineering, Solid Mechanics
Contributors: Wang, F., Sigmund, O.
Pages: 39-40
Publication date: 2017

Host publication information
Title of host publication: Proceedings of the 2017 International Conference on Numerical Simulation of Optoelectronic Devices (NUSOD)
Publisher: IEEE
ISBN (Electronic): 978-1-5090-5323-0
Keywords: Photonic crystal, Cavity, Topology optimization, Shape optimization
DOIs:
10.1109/NUSOD.2017.8009980
Research output: Research - peer-review › Article in proceedings – Annual report year: 2017
