Planar Hall ring sensor for ultra-low magnetic moment sensing

The field sensitivity of a planar Hall effect (PHE) micro-ring type biosensor has been investigated as a function of magnetizing angle of the sensor material, for the sensing of low magnetic moment superparamagnetic labels. The field sensitivity is maximal at a magnetizing angle of $\alpha = 20^\circ$. At this optimized magnetizing angle, the field sensitivity of a PHE sensor is about 3.6 times higher than that measured at the conventional configuration, $\alpha = 90^\circ$. This optimization enables the PHE-ring sensor to detect superparamagnetic biolabels with ultra-low magnetic moments down to $4 \times 10^{-13}$ emu.

General information
State: Published
Organisations: National Food Institute, Universite de Montpellier, Daegu Gyeongbuk Institute of Science and Technology
Contributors: Hung, T. Q., Terki, F., Kamara, S., Kim, K., Charar, S., Kim, C.
Number of pages: 1
Pages: 154505
Publication date: 2015
Peer-reviewed: Yes
