Polarization dependence of mode group selective air clad photonic lanterns

Polarization dependence of loss and cross talk of an air-clad photonic lantern is experimentally investigated. Polarization dependence of two SDM 10 Gbit/s channels transmitted up to 20 km without any MIMO processing is further investigated.

General information
Publication status: Published
Organisations: Department of Photonics Engineering, Fiber Optics, Devices and Non-linear Effects, Centre of Excellence for Silicon Photonics for Optical Communications, High-Speed Optical Communication
Contributors: Mariam Mathew, N., Grüner-Nielsen, L., Gallii, M., Lillieholm, M., Usuga Castaneda, M. A., Rottwitt, K.
Number of pages: 3
Publication date: 2019

Host publication information
Title of host publication: Optical Fiber Communication Conference 2019
Publisher: Optical Society of America
Article number: Th3D.6
ISBN (Print): 978-1-943580-53-8
DOIs: 10.1364/OFC.2019.Th3D.6

Bibliographical note
From the session: SDM Devices (Th3D)
Source: PublicationPreSubmission
Source-ID: 170165093
Research output: Chapter in Book/Report/Conference proceeding › Article in proceedings – Annual report year: 2019 › Research › peer-review
