Reconstruction of an InAs nanowire using geometric and algebraic tomography

Reconstruction of an InAs nanowire using geometric and algebraic tomography

Geometric tomography and conventional algebraic tomography algorithms are used to reconstruct cross-sections of an InAs nanowire from a tilt series of experimental annular dark-field images. Both algorithms are also applied to a test object to assess what factors affect the reconstruction quality. When using the present algorithms, geometric tomography is faster, but artifacts in the reconstruction may be difficult to recognize.

General information
State: Published
Organisations: Center for Electron Nanoscopy, Technische Universität München
Contributors: Pennington, R. S., König, S., Alpers, A., Boothroyd, C., Dunin-Borkowski, R. E.
Pages: 012045
Publication date: 2011
Peer-reviewed: Yes

Publication information
Journal: Journal of Physics: Conference Series
