Software-Supported USER Cloning Strategies for Site-Directed Mutagenesis and DNA Assembly - DTU Orbit (16/03/2019)

Software-Supported USER Cloning Strategies for Site-Directed Mutagenesis and DNA Assembly

USER cloning is a fast and versatile method for engineering of plasmid DNA. We have developed a user friendly Web server tool that automates the design of optimal PCR primers for several distinct USER cloning-based applications. Our Web server, named AMUSER (Automated DNA Modifications with USER cloning), facilitates DNA assembly and introduction of virtually any type of site-directed mutagenesis by designing optimal PCR primers for the desired genetic changes. To demonstrate the utility, we designed primers for a simultaneous two-position site-directed mutagenesis of green fluorescent protein (GFP) to yellow fluorescent protein (YFP), which in a single step reaction resulted in a 94% cloning efficiency. AMUSER also supports degenerate nucleotide primers, single insert combinatorial assembly, and flexible parameters for PCR amplification. AMUSER is freely available online at .

General information
State: Published
Organisations: Novo Nordisk Foundation Center for Biosustainability, Bacterial Cell Factories, Center for Biological Sequence Analysis, Department of Systems Biology, Department of Chemistry, Drug Resistance and Community Dynamics, University of Copenhagen
Contributors: Genee, H. J., Bonde, M. T., Bagger, F. O., Jespersen, J. B., Sommer, M. O. A., Wernersson, R., Olsen, L. R.
Number of pages: 8
Pages: 342-349
Publication date: 2015
Peer-reviewed: Yes
