Standards for EV charging and their usability for providing V2G services in the primary reserve market - DTU Orbit (22/12/2018)

Standards for EV charging and their usability for providing V2G services in the primary reserve market

Transition to sustainable energy and transport is inevitable, which brings new challenges for the existing power grid. Meanwhile, electric vehicles (EVs) are becoming more widespread and their potential for grid support services is becoming more evident. However, such intelligent integration of EVs into a smart grid is highly dependent on infrastructure and communication. This work overviews and analyses the current state of available standards in the field of eMobility. It particularly focuses on their usability for enabling V2G services such as primary frequency regulation.

General information
State: Published
Organisations: Department of Electrical Engineering, Center for Electric Power and Energy, Distributed Energy Resources, University of Delaware, Nuvve Corporation
Contributors: Martinenas, S., Vandael, S., Andersen, P. B., Christensen, B.
Number of pages: 8
Publication date: 2016

Host publication information
Title of host publication: Proceedings of International Battery, Hybrid and Fuel Cell Electric Vehicle Symposium 2016
ISBN (Print): 9781510832701
Keywords: Smart grid, V2G (vehicle to grid), Standardization, Electric vehicle, Communication
Source: PublicationPreSubmission
Source-ID: 123999784
Research output: Research - peer-review > Article in proceedings – Annual report year: 2016
