Test of Tree Core Sampling for Screening of Toxic Elements in Soils from a Norwegian Site - DTU Orbit (22/12/2018)

Test of Tree Core Sampling for Screening of Toxic Elements in Soils from a Norwegian Site

Tree core samples have been used to delineate organic subsurface plumes. In 2009 and 2010, samples were taken at trees growing on a former dump site in Norway and analyzed for arsenic (As), cadmium (Cd), chromium (Cr), copper (Cu), nickel (Ni), and zinc (Zn). Concentrations in wood were in averages (dw) 30 mg/kg for Zn, 2 mg/kg for Cu, and
