Wrong, but not failed?
Making strategy implementation resilient

WHEN SUCCESS DEPENDS ON THE UNKNOWN
The success of strategy implementation typically depends on conditions we cannot foresee, and which will only become obvious during or after implementation.

HOW DO LEADING BUSINESSES IMPLEMENT RESILIENT STRATEGIES?
We investigated resilient behaviour in businesses implementing strategy under highly uncertain conditions. Some examples of their responses are quoted below.

EXPOSURE
Change the setting to fit the needs of implementation.

- "We decided not to make a Chinese footprint." CEO after considering the uncertainties of setting up production in China.

- "Munich is a lot closer than the US. That made a huge difference to our strategy execution." CEO responsible for implementing strategy under highly uncertain conditions.

BUFFERING
Add excess capacity to initiatives that must not fail.

- "We identify projects that we must win, and then we do something extra, adding more management capacity and putting more effort in talking to clients, and finding the right partners." CEO discussing initiatives that must not fail.

- "If you are too 'locked down' in how to invest, and something happens in some country after six months, you lose the opportunity to respond to those opportunities." CEO discussing initiatives that must not fail.

MODIFIABILITY
Implement initiatives that can be easily modified.

- "What shouldn't change is the desired outcome. But you have to be able to adapt your approach to that outcome." CEO discussing committing to outcomes rather than approaches.

- "We should not come [up] with a global strategy of 250 pages because then there's no room left to manoeuvre." CEO on avoiding commitment to detailed plans.

REDUNDANCY
Launch parallel, expendable initiatives, and commit later.

- "We expect nine out of ten to fail, or at least four out of five to fail, and that's not really part of our culture." CEO discussing expendability of strategy initiatives.

- "We would probably have 10, 15, what we would call, moonshots. [...] we may consider to invest more and also some of the others we may decide to kill early on." CEO on high-risk, high-gain strategy initiatives.

MULTIFUNCTIONALITY
Implement initiatives with many successful outcomes.

- "If you come up with a very firm, fixed end-state, that might be right at the point you did that, but maybe five seconds later or a year later, that might be totally wrong. [...] it's more [about] direction than destination." CEO about open-ended initiatives.

- "Some projects are just projects, business. Okay [...]. But this project we should have some learning around, and say, "is there something in there that we can apply to other projects". CEO discussing initiatives with multiple objectives.
