Citation (APA):
Improving dielectric permittivity by incorporating PDMS-PEG multi block copolymer into PDMS network

Aliff H. A Razak
Danish Polymer Centre (DPC)
Main supervisor: Anne Ladegaard Skov
Co-supervisor: Peter Szabo
Outline

• INTRODUCTION:
  – Dielectric electroactive polymer (DEAP).
  – Poly(dimethylsiloxane) (PDMS) versus Poly(ethylene glycol) (PEG)
  – Morphology of block copolymer and phase continuity
  – Experimental setup and characterization methods
• RESULTS
  – Properties of PDMS-PEG multi block copolymer
  – Binary polymer blends of PDMS-PEG block copolymer and commercial PDMS elastomer
• CONCLUSION
Principal of DEAP material
PDMS versus PEG

PDMS

- Hydrophobic
- Low surface energy
- Low conductivity
- Wide temperature range
- High stability
- Low modulus
- Low permittivity

PEG

- Hydrophilic
- High surface energy
- Low toxicity
- High mobility in solution
- High permittivity
- High Conductivity
Morphology in block copolymer (AB) $^{1, 2}$

Phases in polymer blend

Illustration of PDMS: PDMS-PEG BC polymer blend

Sequence(s) of project

1\textsuperscript{st} step - synthesize PDMS-PEG prepolymer

2\textsuperscript{nd} step - Blending PDMS-PEG block copolymer with commercial PDMS elastomer

3\textsuperscript{rd} step - crosslinking with methylhydrosiloxane-dimethylsiloxane copolymer (HMS-501)
# Experimental setup

Characterization

1. Chemical reaction
   • NMR (Si-H ~ 4.70ppm)
2. Mechanical properties
   • LVE properties.
   • Parallel plate (25 mm)
3. Electrical properties
   • Dielectric properties
   • 20 mm electrode
4. Contact angle
   • Sessile method
   • Static contact angle

1. Bruker 300 MHz NMR
2. Rheometer (ARES-G2)
3. Novocontrol GmbH
4. Dataphysics OCA20
Result: Block copolymer (H21, H11, H03, SIH)
Contact angle for all block copolymer

Comparison of contact angle between pure PDMS (Wacker) and PDMS-PEG block copolymers

- MJK 4/13 A & B
- PDMS-PEG (SIH617.0)
- PDMS-PEG (H03)
- PDMS-PEG (H11)
- PDMS-PEG (H21)
Comparison of **Permittivity** among H21, H11, H03 and SIH
Comparison of **Conductivity** among H21, H11, H03 and SIH

![Graph showing conductivity comparison](chart.png)
Comparison of **modulus** among H21, H11, H03 and SIH
Result: Binary polymer blend of PDMS-PEG block copolymer and commercial PDMS elastomer
Comparison of permittivity for PDMS-PEG (H03) with commercial PDMS elastomer
Comparison of conductivity for PDMS-PEG (H03) with commercial PDMS elastomer
Comparison of **modulus** for PDMS-PEG (H03) with commercial PDMS elastomer
Conclusion

- PDMS-PEG is a conductive block copolymer ($10^{-8}$ S/cm) with amphiphilic behaviour.
- Incorporating PDMS-PEG (H03) with commercial PDMS elastomer:
  - Improve storage permittivity up to 60% with low loss permittivity.
  - Maintain LVE properties compared to the commercial.
  - Has amphiphilic behaviour (contrast with PDMS elastomer).
Thank you
