This prototype allows Service Providers to define topology-wide and SDN-based (ONOS) network policies, by means of abstracting the underlying ONOS implementation and the use of generic interfaces. This prototype disaggregates the policy manager and the policies as different ONOS apps that communicate through REST, allowing the addition of new policy types without affecting the policy manager. Currently, 3 policy types are supported: Firewall, NAT and Connectivity.

### Policy Model and Policy Lifecycle

- Loosely based on the Policy Core Information Model (PCIM) (RFC 3060 and RFC 3460)
- A priority is also assigned to each policy.
- Conditions provided in CNF (OR set of ANDs) or DNF (AND set of ORs).
- Pushed to the Policy Manager in JSON format through the REST API.

#### Policy Manager REST API endpoints

- GET /policies
- GET /policies/active
- POST /policies
- GET /policies/id/{id}
- PUT /policies/id/{id}/priority/{newPriority}
- DELETE /policies/deactivate/{id}
- GET /policies/state/{state}
- DELETE /policies
- GET /policies/num
- DELETE /policytype/deregister/{policyType}
- GET /policies/activate/{id}

#### Policies REST API endpoints

- POST / formalvalidation
- POST / enforce
- POST / contextvalidation
- POST / remove
