The Debye-Hückel theory and its importance in modeling electrolyte solutions

A collocation method for surface tension calculations with the density gradient theory

A comment on water’s structure using monomer fraction data and theories

An electrolyte CPA equation of state for mixed solvent electrolytes

Development of an Electrolyte CPA Equation of State for Applications in the Petroleum and Chemical Industries

Process Design of Industrial Triethylene Glycol Processes Using the Cubic-Plus-Association (CPA) Equation of State

Modeling of Dielectric Properties of Aqueous Salt Solutions with an Equation of State

Modeling of dielectric properties of complex fluids with an equation of state

Approach to Improve Speed of Sound Calculation within PC-SAFT Framework

Comparison of the Debye–Hückel and the Mean Spherical Approximation Theories for Electrolyte Solutions

Process simulation of CO₂ capture with aqueous ammonia using the Extended UNIQUAC model

Solids Modelling and Capture Simulation of Piperazine in Potassium Solvents
