Hub-based truck platooning
Potentials and profitability

Integrating police reports with geographic information system resources for uncovering patterns of pedestrian crashes in Denmark

A Joint Route Choice Model for Capturing Preferences of Electric and Conventional Car Drivers

A unified public transport assignment model for mixed schedule- and frequency-based networks

Considering built environment and spatial correlation in modelling pedestrian injury severity

Intelligent truck platooning: how to make it work

Modelling af cykeltrafik

Modelling Railway-Induced Passenger Delays in Multi-Modal Public Transport Networks: An Agent-Based Copenhagen Case Study Using Empirical Train Delay Data

Output variability caused by random seeds in a multi-agent transport simulation model

Stochastic user equilibrium with a bounded choice model

The influence of frequency on route choice in mixed schedule and frequency-based public transport systems – The case of the Greater Copenhagen Area

The Influence of Frequency on Route Choice in Mixed Schedule- and Frequency-based Public Transport Systems - The Case of the Greater Copenhagen Area

A Joint Route Choice Model for Electric and Conventional Car Users

Considering built environment and spatial correlation in modelling pedestrian injury severity

Dynamisk vejvalgsmodel for Hovedstadsområdet

Integrated Optimisation for Public Transport System with Joint Schedule- and Frequency-Based Services

Integrating police reports with geographic information system resources for uncovering multidimensional patterns of pedestrian crashes in Denmark

Joint modeling of schedule- and frequency-based services in public transport assignment models

The forming of truck platoons: How to make it work
The restricted stochastic user equilibrium with threshold model: Large-scale application and parameter testing

Threshold-based Stochastic User Equilibrium models

Infrastructure and spatial effects on the frequency of cyclist-motorist collisions in the Copenhagen Region

Timetable-based simulation method for choice set generation in large-scale public transport networks

Improved methods to deduct trip legs and mode from travel surveys using wearable GPS devices: A case study from the Greater Copenhagen area

Stochastic user equilibrium with equilibrated choice sets: Part II - Solving the restricted SUE for the logit family

Stochastic user equilibrium with equilibrated choice sets: Part I - Model formulations under alternative distributions and restrictions

Traffic assignment models in large-scale applications

Estimating Value of Congestion and of Reliability from Observation of Route Choice Behavior of Car Drivers

Risk Factors Associated with Crash Severity on Low-Volume Rural Roads in Denmark

A disaggregate pseudo-dynamic assignment for the activity-based model of the Greater Copenhagen Area

Issues in current User Equilibrium models and introduction of the Restricted Stochastic User Equilibrium conditions

Risk factors associated with crash severity on low-volume rural roads in Denmark

Generation and quality assessment of route choice sets in public transport networks by means of RP data analysis
