A Photolabile Linker for the Solid-Phase Synthesis of Peptide Hydrazides and Heterocycles

A photolabile hydrazine linker for the solid-phase synthesis of peptide hydrazides and hydrazine-derived heterocycles is presented. The developed protocols enable the efficient synthesis of structurally diverse peptide hydrazides derived from the standard amino acids, including those with side-chain protected residues at the C-terminal of the resulting peptide hydrazide, and are useful for the synthesis of dihydropyrano[2,3-c]pyrazoles. The linker is compatible with most commonly used coupling reagents and protecting groups for solid-phase peptide synthesis.

General information
Publication status: Published
Organisations: Department of Chemistry, Organic Chemistry, Nanyang Technological University
Contributors: Qvortrup, K., Komnatnyy, V. V., Nielsen, T. E.
Pages: 4782-4785
Publication date: 2014
Peer-reviewed: Yes
