Biotechnological Trends in Spider and Scorpion Antivenom Development - DTU Orbit (30/07/2019)

Biotechnological Trends in Spider and Scorpion Antivenom Development
Spiders and scorpions are notorious for their fearful dispositions and their ability to inject venom into prey and predators, causing symptoms such as necrosis, paralysis, and excruciating pain. Information on venom composition and the toxins present in these species is growing due to an interest in using bioactive toxins from spiders and scorpions for drug discovery purposes and for solving crystal structures of membrane-embedded receptors. Additionally, the identification and isolation of a myriad of spider and scorpion toxins has allowed research within next generation antivenoms to progress at an increasingly faster pace. In this review, the current knowledge of spider and scorpion venoms is presented, followed by a discussion of all published biotechnological efforts within development of spider and scorpion antitoxins based on small molecules, antibodies and fragments thereof, and next generation immunization strategies. The increasing number of discovery and development efforts within this field may point towards an upcoming transition from serum-based antivenoms towards therapeutic solutions based on modern biotechnology.

General information
Publication status: Published
Organisations: Department of Biotechnology and Biomedicine, Network Engineering of Eukaryotic Cell factories, Department of Bio and Health Informatics, Immunoinformatics and Machine Learning, Genomic Epidemiology, Technical University of Denmark
Contributors: Laustsen, A. H., Solà, M., Jappe, E. C., Oscoz Cob, S., Lauridsen, L. P., Engmark, M.
Number of pages: 33
Publication date: 2016
Peer-reviewed: Yes

Publication information
Journal: Toxins
Volume: 8
Issue number: 8
Article number: 226
ISSN (Print): 2072-6651
Ratings:
BFI (2016): BFI-level 1
Scopus rating (2016): CiteScore 3.34 SJR 0.984 SNIP 1.221
Web of Science (2016): Impact factor 3.03
Web of Science (2016): Indexed yes
Original language: English
Keywords: Antivenom, Spider Venoms, Scorpion Venoms, Antibodies, Venomics, Antivenom Design, Venom Neutralization, Antitoxins
Electronic versions:
