Characterization of the Impact of $\beta_2$ and $\beta_3$ in Four-Wave Mixing Optical Time Lenses using Input-Output Cross-Correlations - DTU Orbit (06/11/2019)

Characterization of the Impact of $\beta_2$ and $\beta_3$ in Four-Wave Mixing Optical Time Lenses using Input-Output Cross-Correlations

We propose the use of input-output cross correlations to quantify the performance of four-wave mixing time lenses with dispersion-induced degradation. The impact of dispersion variations is investigated.

General information
Publication status: Published
Organisations: Department of Photonics Engineering, High-Speed Optical Communication, Centre of Excellence for Silicon Photonics for Optical Communications
Contributors: Klejs, F., Lillieholm, M., Galili, M., Oxenløwe, L. K.
Number of pages: 2
Pages: 1-2
Publication date: 2018

Host publication information
Title of host publication: Proceedings of 2018 CLEO: Applications and Technology 2018
Publisher: Optical Society of America
DOIs: 10.1364/CLEO_AT.2018.JTu2A.68

Bibliographical note
From the session: Poster Session I (JTu2A)
Source: FindIt
Source ID: 2438377255
Research output: Chapter in Book/Report/Conference proceeding › Article in proceedings – Annual report year: 2018 › Research › peer-review
