Chitosan complements entrapment of silicon inside nitrogen doped carbon to improve and stabilize the capacity of Li-ion batteries. Prasanna, K., Subburaj, T., Jo, Y. N., Santhoshkumar, P., Karthikeyan, S. K. S. S., Vediappan, K., ... Lee, C. W. (2019). Chitosan complements entrapment of silicon inside nitrogen doped carbon to improve and stabilize the capacity of Li-ion batteries. Scientific Reports, 9(1), [3318]. https://doi.org/10.1038/s41598-019-39988-4
