CRYSTAL STRUCTURE OF HUMAN DOPAMINE BETA-HYDROXYLASE

A crystalline form of dopamine β-hydroxylase is provided. X-ray crystallography reveals the space group and cell dimensions, as well as the atomic coordinates. The information can be used for identifying one or more modulators of dopamine β-hydroxylase, which can then be chemically synthesised and used in treatment. A process for preparing the crystalline form of human dopamine β-hydroxylase is also provided.

General information
Publication status: Published
Organisations: Department of Chemistry, Metalloprotein Chemistry and Engineering, University of Copenhagen
Contributors: Harris, P. H., Christensen, H. E. M., Vendelboe, T. V.
Publication date: 12 Oct 2017
