Definition and evaluation of product configurator development strategies

Product configurators represent one of the most successful applications of artificial intelligence principles. Product configurators are a subtype of software-based expert systems with a focus on the creation of product specifications. The use of product configurators has resulted in many positive effects in engineering-oriented companies such as reduced lead times, fewer errors, shorter learning periods for new employees, etc. Unfortunately, many configuration projects also fail because the task of developing the configurator turns out to be much more difficult and time-consuming than anticipated. Thus, it is crucial to apply the appropriate strategy. However, the literature does not discuss different strategic alternatives in a detailed manner; it only provides generalised recommendations of single strategies. To deal with this issue, this paper defines and compares seven different strategies for the development of product configurators. The relevance of the defined strategies is supported by seven named case studies.

General information
Publication status: Published
Organisations: Department of Management Engineering, Production and Service Management, Department of Mechanical Engineering, Engineering Design and Product Development, University of Southern Denmark
Contributors: Haug, A., Hvam, L., Mortensen, N. H.
Pages: 471-481
Publication date: 2012
Peer-reviewed: Yes

Publication information
Journal: Computers in Industry
Volume: 63
Issue number: 5
ISSN (Print): 0166-3615
Ratings:
BFI (2012): BFI-level 1
Scopus rating (2012): CiteScore 2.98 SJR 1.104 SNIP 3.08
Web of Science (2012): Impact factor 1.709
ISI indexed (2012): ISI indexed yes
Web of Science (2012): Indexed yes
Original language: English
Keywords: Product configuration, Product configurator, Knowledge acquisition, Knowledge engineering, Expert systems
