Development and design of micro products

Development and design of micro products

Innovation within the field of micro and nano technology is characterized by cross-disciplinary skills. The IT-sector driven development of materials/technologies related to semiconductors and silicon. The more traditional materials polymers, metals, ceramics: well suited for mass production but not widespread in micro products today. New possibilities with expensive materials in micro products.

General information
Publication status: Published
Organisations: Department of Management Engineering
Contributors: Hansen, H. N.
Publication date: 2004

Host publication information
Title of host publication: Latest trends in Micro- & Nanotechnology
Publisher: IPL
Editor: I. E.
URLs:
http://www.ipl.dtu.dk/publikation/8448/dk/
Source: orbit
Source-ID: 178011
Research output: Chapter in Book/Report/Conference proceeding » Article in proceedings – Annual report year: 2004 » Research » peer-review
