Fifty years of Fanger’s equation: Is there anything to discover yet?

This short communication to the Editor is completely devoted to a recent paper published by Broday et al. (2017) in which a comparative analysis of methods for determining the clothing surface temperature is reported. Contrarily to what our colleagues have found, we will demonstrate that the algorithms reported in ISO 7730 and ASHRAE 55 Standards from more than 30 years are reliable and consistent with other home-made codes based on different numerical techniques.

General information
Publication status: Published
Organisations: Department of Civil Engineering, Section for Indoor Climate and Building Physics, University of Salerno, University of Naples Federico II
Corresponding author: Palella, B. I.
Contributors: d’Ambrosio Alfano, F. R., Palella, B. I., Riccio, G., Toftum, J.
Pages: 157-160
Publication date: 2018
Peer-reviewed: Yes

Publication information
Journal: International Journal of Industrial Ergonomics
Volume: 66
ISSN (Print): 0169-8141
Ratings:
BFI (2018): BFI-level 1
Scopus rating (2018): CiteScore 2.11 SJR 0.546 SNIP 1.552
Web of Science (2018): Impact factor 1.571
Web of Science (2018): Indexed yes
Keywords: Thermal comfort, PMV, Comfort indices, Thermal environments, Physical environments, Standards
