Infection of pigs with African swine fever virus via ingestion of stable flies (Stomoxys calcitrans) - DTU Orbit (28/09/2019)

**Infection of pigs with African swine fever virus via ingestion of stable flies (Stomoxys calcitrans)**

Within Eastern Europe, African swine fever virus (ASFV) has unexpectedly spread to farms with high biosecurity. In an attempt to explain this process, pigs were allowed to ingest flies that had fed on ASFV-spiked blood, which had a realistic titre for an infected pig. Some of the pigs became infected with the virus. Thus, ingestion of blood-sucking flies, having fed on ASFV-infected wild boar before entering stables, represents a potential route for disease transmission.

**General information**
Publication status: Published
Organisations: National Veterinary Institute, Virology, Epidemiology
Corresponding author: Bødker, R.
Contributors: Olesen, A. S., Lohse, L., Hansen, M. F., Boklund, A., Halasa, T., Belsham, G. J., Rasmussen, T. B., Bøtner, A., Bødker, R.
Pages: 1152-1157
Publication date: 2018
Peer-reviewed: Yes

**Publication information**
Journal: Transboundary and Emerging Diseases
Volume: 65
Issue number: 5
ISSN (Print): 1865-1674
Ratings:
BFI (2018): BFI-level 1
Scopus rating (2018): CiteScore 3.35 SJR 1.227 SNIP 1.564
Web of Science (2018): Impact factor 3.554
Web of Science (2018): Indexed yes
Keywords: African swine fever, Blood-feeding flies, Haemorrhagic disease, Stomoxys calcitrans, Virus transmission
Original language: English
