MCDA and Risk Analysis in Transport Infrastructure Appraisals: the Rail Baltica Case

This paper sets out a decision support system (DSS), COSIMA, involving the combination of cost-benefit analysis and multicriteria decision analysis (MCDA) for transport infrastructure appraisals embracing both economic and strategic impacts. However, some shortcomings appear in the methodology regarding the uncertainties embedded within the criteria weights in the MCDA-part of COSIMA. Therefore, this paper presents the perspective of introducing risk analysis and Monte Carlo simulation to the weighting profile in the MCDA-part. The DSS is presented through a case study concerning alternatives for the construction of the Rail Baltica railway line through the Baltic countries and Poland.

General information
Publication status: Published
Organisations: Decision Modelling, Department of Transport
Contributors: Ambrasaitė, I., Barfod, M. B., Salling, K. B.
Pages: 944-953
Publication date: 2011
Peer-reviewed: Yes

Publication information
Journal: Procedia - Social and Behavioral Sciences
Volume: 20
ISSN (Print): 1877-0428
Ratings:
Scopus rating (2011): SJR 0.164 SNIP 0.16
ISI indexed (2011): ISI indexed no
Original language: English
Keywords: Composite Modelling Assessment, Multi-Criteria Decision Analysis, Cost-Benefit Analysis, Risk Analysis, Decision Support Systems
