New trends in important diseases affecting the culture of fish and molluscs in the ICES area 2002-2015 - DTU Orbit (25/09/2019)

New trends in important diseases affecting the culture of fish and molluscs in the ICES area 2002-2015

The ICES Working Group on Pathology and Diseases of Marine Organisms (WGPDMO) provides annual reviews of national reports on the disease status of wild and farmed fish and molluscs in the ICES area. In 2004, the group published a first report collating this information from 1998-2002. This second report aims to provide an update on the status of the major diseases described in the original report and also to provide an overview of new diseases which have emerged since the previous report was published.

General information
Publication status: Published
Organisations: National Veterinary Institute, Fish Diseases, National Veterinary Institute, University of Aberdeen, Virginia Institute of Marine Science, Marine Institute, Cefas Weymouth Laboratory, Rutgers University, Fisheries and Oceans Canada, Norwegian Veterinary Institute
Number of pages: 57
Publication date: 2017

Publication information
Publisher: International Council for the Exploration of the Sea (ICES)
ISBN (Print): 978-87-7482-201-1
Original language: English
(I C E S Cooperative Research Report; No. 337).
Electronic versions:
