Utilization and control of ecological interactions in polymicrobial infections and community-based microbial cell factories

Microbial activities are most often shaped by interactions between co-existing microbes within mixed-species communities. Dissection of the molecular mechanisms of species interactions within communities is a central issue in microbial ecology, and our ability to engineer and control microbial communities depends, to a large extent, on our knowledge of these interactions. This review highlights the recent advances regarding molecular characterization of microbe-microbe interactions that modulate community structure, activity, and stability, and aims to illustrate how these findings have helped us reach an engineering-level understanding of microbial communities in relation to both human health and industrial biotechnology.

General information
Publication status: Published
Organisations: Department of Systems Biology, Infection Microbiology, Roskilde University
Contributors: Wigneswaran, V., Amador Hierro, C. I., Jelsbak, L., Sternberg, C., Jelsbak, L.
Number of pages: 7
Publication date: 2016
Peer-reviewed: Yes

Publication Information
Journal: F1000Research
Volume: 5
Article number: 421
ISSN (Print): 2046-1402
Ratings:
Scopus rating (2016): CiteScore 1.2 SJR 0.813 SNIP 0.475
