VETSTAT - the Danish system for surveillance of the veterinary use of drugs for production animals
The Danish Ministry of Food, Agriculture and Fisheries funds a monitoring system based on drug usage information collected at the herd level: VETSTAT. VETSTAT is constructed as a relational database and data originates from three sources: pharmacies, veterinarians and feed mills. All administration of drugs for use in animal production is reported on a monthly basis. Pharmacies provided 95% of the total weight antimicrobial compounds used in Denmark in 2001. More than 80% of the antimicrobial compounds reported by pharmacies were sold on prescription to end-users (owners) and included information on animal species, age-group and diagnostic grouping; >90% of the total amount of antimicrobials sold on prescription was used for pigs. In 2001, sales of 96,500 kg of antimicrobials were reported.

General information
Publication status: Published
Organisations: Administration and Service, Division of Poultry, Fish and Fur Animals, National Veterinary Institute, Section for Veterinary Epidemiology and public sector consultancy, Division of Veterinary Diagnostics and Research
Contributors: Stege, H., Bager, F., Jacobsen, E., Thougaard, A.
Pages: 105-115
Publication date: 2003
Peer-reviewed: Yes

Publication information
Journal: Preventive Veterinary Medicine
Volume: 57
Issue number: 3
ISSN (Print): 0167-5877
Ratings:
Scopus rating (2003): SJR 0.846 SNIP 1.323
Web of Science (2003): Indexed yes
