Butanol for sustainable aviation

Sustainable Aviation Fuel - Workshop
20.11.2018

Dr. Helena Junicke
heljun@dtu.dk
Outline

Introduction
- Alternative jet fuel pathways
- Alcohol-to-jet

Opportunities for butanol
- Butanol from waste
- The GreenLogic project

Methods and results
- Continuous enrichment studies
- Thermodynamic system design
- Modelling of full-scale reactors

Conclusions

Outlook
Alternative jet fuel pathways

- There are five ASTM D7566 certified pathways for synthetic paraffinic kerosene (SPK) production

<table>

FOCUS

The alcohol-to-jet pathway

Energy crops

Cellulosic materials

Feedstock opportunity

Municipal & Industrial waste streams

Fermentation

Alcohols

Dehydration

Oligomerization

Hydrogenation

Distillation

ATJ (C8-C16)

Opportunities

- ASTM D7566-18 permits blending iso-butanol and ethanol derived SPK with conventional jet fuels of up to 50%
- Sourcing **C2-C5 alcohols from waste**

Non-competition with food production  
Cheap feedstock  
Closing the circular economy gap  
Energy recovery
Butanol from waste – How?

- Anaerobic mixed microbial cultures
- Non-standard conditions (pH 5, increased pH$_2$)

The GreenLogic project

Production of **C2-C5 alcohols** from industrial and municipal waste streams

Upgrading waste water treatment plants (WWTP) into water **resource recovery** facilities (WRRF)

Waste streams → Liquid biofuels

Waste streams → Biogas

Waste streams → Clean water
Anaerobic digestion: The classical view

Polymers
- carbohydrates, proteins, lipids

Monomers
- monosaccharides, amino acids, LCFA

Short-chain fatty acids
- propionate, butyrate, ...

Hydrolysis

Acidogenesis

Acetogenesis

Acetate

Methanogenesis

H₂

CH₄ + CO₂

Current focus
Different microbial groups degrade complex waste streams into biogas.
Anaerobic digestion: Butanol enrichment

Hydrolysis

Polymers
carbohydrates, proteins, lipids

Monomers
monosaccharides, amino acids, LCFA

Short-chain fatty acids
propionate, butyrate, ...

C2-C5 alcohols

Acidogenesis

Solventogenesis

New focus

Operate at pH 5 and high pH₂ to promote alcohol formation.
Thermodynamic system design

- Unlocking butanol formation
- Increase $H_2$, decrease pH (see arrow)

Butanol formation

$$\text{Butyrate}^- + H^+ + 2H_2 \rightarrow \text{Butanol} + H_2O$$

$\Delta G^1 = 0$
$\Delta G^1 < 0$
$\Delta G^1 > 0$
Modelling of full-scale anaerobic digesters

• From biogas towards butanol formation

Confidential information on this slide has been removed.
Conclusions

- **Butanol production** from waste under non-standard conditions

- **Mixed culture biotechnology** as a solution for cheap feedstock conversion into ATJ-SPK

- ATJ-SPK approval for C3-C5 alcohols expected in the *mid-term*; ethanol and iso-butanol are certified already
Outlook

- **Techno-economic analysis** of upstream (H₂ and butyrate sources) and downstream processing

- **Enrichment of new biocatalysts** for butanol formation (microorganisms, enzymes)

- Municipal and industrial waste streams as **cheap and sustainable feedstock** for jet fuel production
Thank you for your attention!
